SakuraGO · English Demo Guide

Public entry: **https://sakuraapp.sysnext.dev/**
Normal employee sign-in. No VPN, company network, OTP or staff approval is needed. Use the employee ID and six-digit PIN in the separate store access instructions.

Choose the employee sign-in option, enter the supplied ID and PIN, then choose Sign in. Both store accounts share a persistent sample workspace in 5S and Machine Pairing. Cloud libraries and inboxes belong to each account separately.

Demo workspace — sample data identifies synthetic records. You may create, edit and complete demo work. Changes remain after logout and restart. No operational records or real employee photographs are included in these workspaces.

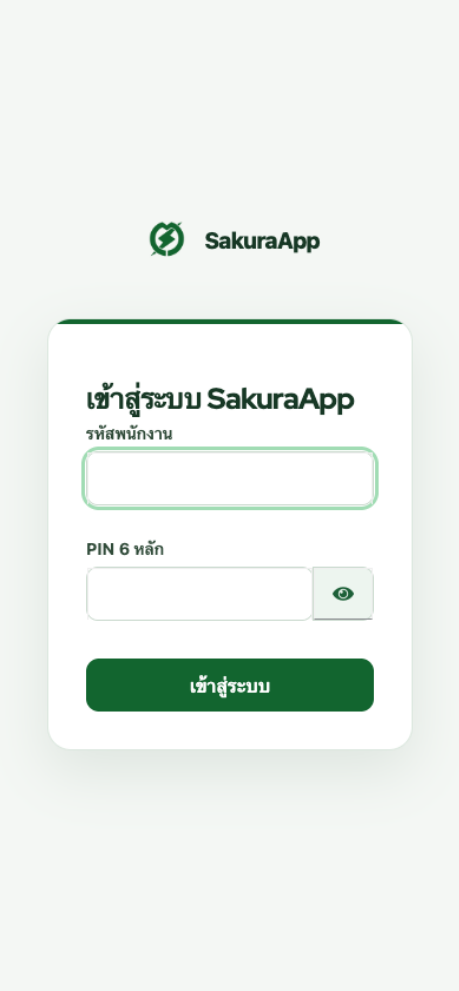

Home controls retained in Thai: Inbox = กล่องงาน; Machine Pairing = จับคู่เครื่องจักร. The exit-arrow icon signs out. The English Demo Guide link opens instructions. The red number on Machine Pairing counts pending demo reviews only; zero is hidden and counts above 99 show 99+.

Employee ID / PIN sign-in

On the first screen choose พนักงาน **Sakura** (Sakura employee). Do not choose the external-personnel option for these accounts. The next screen is the normal production identity provider.

รหัสพนักงาน = Employee ID. **PIN 6** หลัก = Six-digit PIN. เข้าสู่ระบบ = Sign in. Type all leading zeroes. Store credentials are supplied separately. After successful login, Home shows the current account name and portrait.

To switch accounts use the exit-arrow logout button on Home, then choose employee sign-in again. The two accounts share demo cases/machines but do not share Cloud files or inbox read state.

Sakura Cloud · your own 1 GB library

Open **Sakura Cloud**. Three preloaded files are available: sample.png, sample.jpg and sample.pdf. Tap an image or the PDF card to preview. Choose download to save a file; inside the native app, the system share sheet allows sharing to another app. Delete applies only to your own file.

Choose **Upload arrow** อัปโหลด (Upload). In the native app, choose รูปภาพและวิดีโอ (Photos and videos) or ไฟล์และเอกสาร (Files and documents). Select a file and wait for successful upload. Refresh with Refresh icon รีเฟรช. Usage at the top shows consumed storage out of 1 GB. Unsupported or over-quota uploads show an error without removing existing files.

Thai controls: หน้าหลัก = Home; ทั้งหมด = All; ดาวน์โหลด = Download; ลบ = Delete; แท็ก = Tags. Pictures and Documents filter the library. Scans and ordinary files use the same account quota.

Document Scan, biometrics and notifications

Document Scan · native iPhone / Android

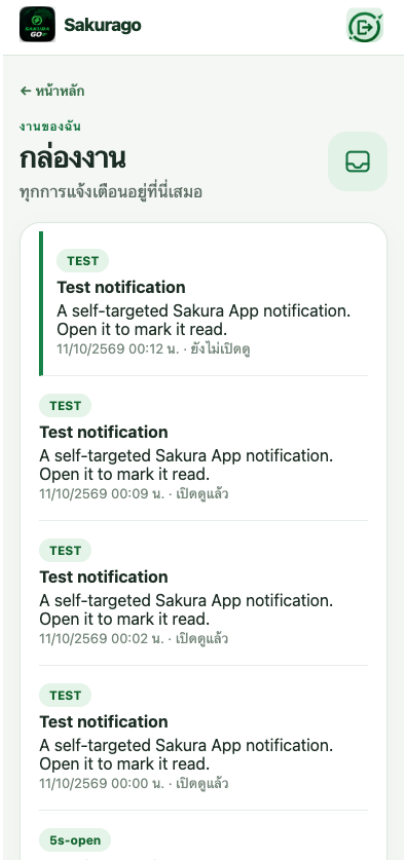

In the installed native app, open Sakura Cloud and choose **Document Scan**. The device opens Apple VisionKit or Android ML Kit. Allow camera access if requested. Capture pages, review edges and pages, then save. The app keeps the PDF locally and uploads it to the signed-in Cloud library. A PDF above the current 20 MB native upload limit remains local; use smaller scans for this review. You can cancel the scanner or deny permission and continue using Cloud uploads and other tools. Android requires supported Google Play services; the scanner may download its component on first use.

Face ID / fingerprint · optional

After a normal PIN login, choose เปิดใช้ (Enable) when offered. Alternatively tap the small circle-shaped biometric button beside logout on Home. Confirm using your own device biometrics. Close and reopen the app, then authenticate. Choose ไว้ก่อน / ยกเลิก (Later / Cancel) to keep PIN login. The PIN/account-switch button remains available; logout forgets the active biometric login. No biometric image or template is uploaded to Sakura.

Inbox and self-targeted notification

Open กล่องงาน (Inbox). Unread sample tasks have a visible unread style/count. Opening a task marks it read and opens its demo record; return to Home to see the updated count. Choose **Send test notification** in Inbox. This saves a labelled test task to your own account and sends through the existing notification worker to registered devices. Enable notifications in the native permission prompt. Tap a received notification to open its inbox item. Denial or cancellation leaves the inbox usable. Home Screen badge presentation depends on the supported device/launcher.

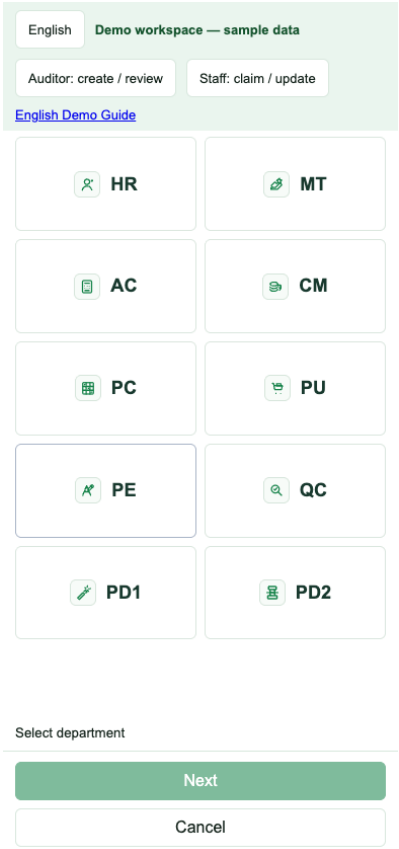

5S · create, claim, update and complete

Open 5S and choose **English** in the green demo bar. **Auditor: create / review** selects the auditor workspace; **Staff: claim / update** selects the staff workspace. These are normal service roles granted within this shared sample workspace.

1 · Create / tag

In Auditor mode choose **Issue claim**, then tap a position on the sample map. Choose the responsible department (HR is the sample team), Next, enter an issue title/details and attach a photo. Continue through the confirmation and submit. Cancelling creates no case. You may use a saved sample image instead of camera capture.

2 · Claim and update

Choose Staff: claim / update. Open the new case or the existing open sample case. Choose รับงาน / Accept, enter a plan and due date, and confirm. Add a progress/result photo and an action note, then submit the work report. The case becomes ready for auditor review.

3 · Review / complete

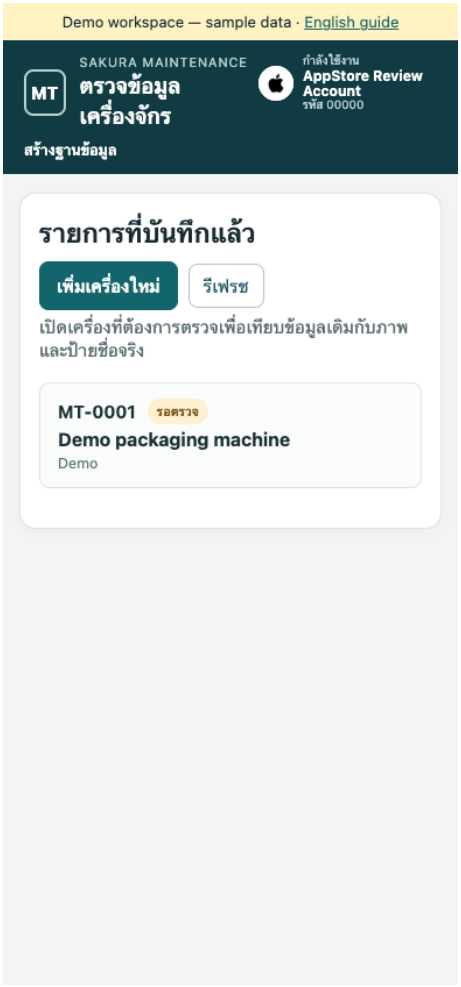

Switch back to Auditor. Open the submitted case and inspect before/after photos. Choose OK / Close to complete it, or NG / Return to reopen the work. The supplied completed sample case shows the final state. Use only this demo workspace; operational 5S rejects these grants.

Machine Pairing · capture and review

Open จับคู่เครื่องจักร (Machine Pairing). Sample machines MT-0001, MT-0002 and MT-0003 are synthetic. Search an ID or scan a QR on the next page. MT-0001 initially has a pending sample mapping; MT-0002 and MT-0003 are available for new evidence.

Select a machine, start capture, then take or upload a full-machine photo and a plate/detail photo. Review the image/crop and observed details. Tick the confirmation and save. Cancelling camera/file selection makes no change; queued evidence remains available for the same account after re-authentication.

Choose รอตรวจ / Review. Open a pending machine, compare its photos and details, then confirm (verify) or flag with a note. The pending badge changes after Home reload. FLAGGED items and unmapped machines are excluded. Retirement/deletion is not granted.

Thai controls: สร้างฐานข้อมูล = Capture/create mapping; รายการที่บันทึกแล้ว = Saved records; เพิ่มเครื่องใหม่ = Add sample machine; รีเฟรช = Refresh; รอตรวจ = Pending review. All record actions and evidence stay in /demo/mt/.

Sample machine QR codes

Scan using the pairing scanner or a phone camera. Links lead only to demo machines. You can instead type the IDs into Machine Pairing; scanning is optional.

MT-0002

https://sakuraapp.sysnext.dev/demo/mt/machine-map?mt=MT-0002

MT-0003

https://sakuraapp.sysnext.dev/demo/mt/machine-map?mt=MT-0003

The backend and credentials must remain available throughout review. This guide describes available functions; store approval is determined by Apple and Google. Native scanning, biometrics and notifications are optional and require supported hardware and permission.
